

BATTCON PRESS RELEASE 2016 FOR MAGAZINES AND WEB SITE

Battcon Stationary Battery Conference

The Battcon Stationary Battery Conference and Trade Show will hold its 20th annual event Tuesday, May 10 to Thursday, May 12, 2016 at the Boca Raton Resort in Boca Raton, Florida, with preconference seminars on May 9. This internationally recognized forum for stationary battery users is focused on the design, selection, application and maintenance of stationary battery systems. The event annually draws record numbers of attendees for four days of professional development and networking.

Battcon is an educational venue where users, engineers and manufacturers stay up-to-date by learning of the latest industry trends and how to apply best practices to the manufacturing, safety, selection, installation, and use of stationary batteries. The core conference provides an intense learning experience unavailable from any other industry source. Presentations include cutting edge topics delivered by leading authorities. Open discussion panels and breakout workshops geared to the utility, UPS, and telecom segments are also included in the conference agenda.

The trade show provides the opportunity to meet with representatives from the industry's leading storage battery related companies, find solutions, and discover the newest advanced products. The trade show is held in the evenings, while the educational component is delivered during the day, allowing attendees to fully experience both the conference and trade show.

Three preconference seminars, each conducted by industry professionals, complement the conference. The Battery Basics seminar addresses the basics of the lead-acid battery and its selection and use. Beyond the Fundamentals provides in-depth information in five key topic areas. The Focus On seminar topic changes annually and is posted on the Battcon web site at www.battcon.com.

If you are a data center, nuclear, telecom, or utility industry professional working in any mission critical facility or are involved in the development of stationary batteries and related equipment, you will find the Battcon experience is second to none. Every year, more end users are discovering Battcon, the conference geared for industry novices and seasoned battery professionals alike.

Challenge yourself to this three day, intensive educational and networking experience. Register online now at www.battcon.com. For more information, email jennifer.stryker@alber.com or call (954) 377-7127.

You're in the industry. Shouldn't you be at Battcon?
